V92N SERIES

Axial Piston Tandem Variable Pumps

Mainly suitable for use in mobile machinery such as excavators, cranes, rotary drilling rigs, etc

Apply to open circuits

Size: 120

Nominal pressure(bar): 350

Peak pressure(bar): 400

Features

- Variable displacement tandem pump for open circuit heavy-duty applications
- High efficiency, long lifespan, and high load capacity
- Advantages such as high load capacity, strong impact resistance, and wear resistance
- Multiple control methods can be combined, with optional angle sensors to achieve flow closed-loop control with higher precision

Technical data

V92N 120 Control principle

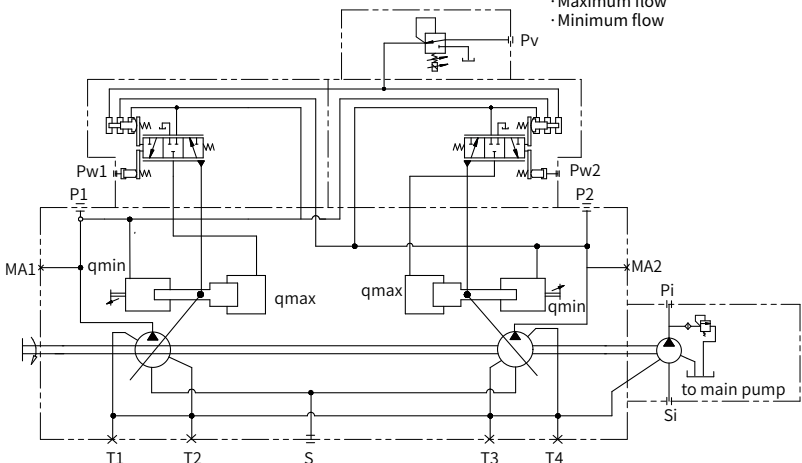

·E1 Electro-proportional displacement control principle

Positive flow electric proportional displacement control. Driven by electromagnet magnetic force, the pump displacement is proportional to the current. The pump is initially located at the minimum displacement V_{gmin} , and as the current rises, the pump displacement increases. When the oil outlet pressure of the pump is less than 30bar, to change the pump from small displacement to large displacement, an external pilot oil source must be provided, with a minimum pressure of 30bar and a maximum pressure of 50bar.
